                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 11  |

(P) (i, 1882).....                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 245 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 822 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 426 |

 | Converting Petroleum into. (P) Murray. From Schmal. (iv, 1885) .....                                                      | 679  |
| Corrosion of Nickel Cooking Vessels by Organic. (Rohde.) (ix, 1890) .....                                                 | 92   |
| Crystallisation of. (P) Barton and Lawrence. (ix, 1890) .....                                                             | 727  |
| Detection of Mineral, in Presence of Organic. (Nickel.) (xiii, 1894) .....                                                | 423  |
| Detection of Mineral, in Vinegar. (Griegel.) (xiii, 1894) .....                                                           | 423  |
| Determ. of Affinities of. (Kastle and Keiser.) (xiv, 1895) .....                                                          | 688  |
| Determination of Organic. (Grosjean.) (ii, 1883) .....                                                                    | 342  |
| Difficult Solubility of Pure Zinc in. (Weeven.) (x, 1891) .....                                                           | 955  |
| Discussion on Kaising. (vi, 1887) .....                                                                                   | 213  |
| Drying Unsaturated, in Fats and Oils. (Hazura.) (vii, 1888) .....                                                         | 219  |
| Electrolysis of, Change in R-tort Carbon when used in the. (D Bray and Pechard.) (vi, 1887) .....                         | 673  |
| Estim. of Free HCl in Organic. (Bedson.) (xii, 1893) .....                                                                | 119  |
| Estimation of Free, in Butter. (Besarin.) (x, 1891) .....                                                                 | 800  |
| Estimation of Insoluble Non-Volatile Fatty. (Meillere.) (xii, 1894) .....                                                 | 983  |
| Extraction of Pure, from Alkaline Salts. (P) Placet and Bonnet. (xiii, 1894) .....                                        | 37   |
| Fatty, and Glycerin from Fats and Oils. (P) Lewkowitsch. (viii, 1889) .....                                               | 290  |
| Fatty, for Manuf. of Soap, Prep. of. (Hartmann.) (ii, 1883) .....                                                         | 479  |
| Fatty, in Glycerin. (Sulan and Berry.) (v, 1886) .....                                                                    | 177  |
| Fatty, in Soap. (Schnaible.) (x, 1891) .....                                                                              | 277  |
| Fatty, of Drying Oils. (Hazura.) (viii, 1889) .....                                                                       | 806  |
| Formation of Organic, in the Beet. (Lepay.) (viii, 1889) .....                                                            | 631  |
| Formed during Malting Barley, Boiling Wort, &c. (Prior.) (xiv, 1895) .....                                                | 672  |
| Free Fatty, in Oils and Fats. (Noerdlinger.) (viii, 1889) .....                                                           | 806  |
| Free, in Wine. (Kayser.) (i, 1882) .....                                                                                  | 115  |
| From Beetroot Juice, Organic. (von Lippmann.) (xi, 1892) .....                                                            | 50   |
| Gas Volumetric Estim. of Organic. (Kux.) (xii, 1893) .....                                                                | 713  |
| Glass Retorts for Concentration of. (P) Webb. (x, 1891) .....                                                             | 1007 |
| In Oils, Estimation of Free. (Richter.) (ii, 1883) .....                                                                  | 480  |
| In Soap, Estimation of Fatty. (Schmiz.) (vi, 1887) .....                                                                  | 389  |
| In Wine, Estimation of Fixed Organic. (Schmitt and Hepe.) (ii, 1883) .....                                                | 355  |
| In Wines, Determ. of Volatile. (Burcker.) (xiv, 1895) .....                                                               | 830  |
| Indicators for. (Langbeck.) (i, 1882) .....                                                                               | 245  |
| Indicators for Determ. Basicity of Polybasic. (Engel.) (v, 1886) .....                                                    | 392  |
| Influence of Organic, on Alcoholic Fermentation. (Lafar.) (xiv, 1895) .....                                               | 1054 |
| Iron Vessel for Holding. (P) Pohl. (iv, 1885) .....                                                                       | 197  |
| Manuf. of Compounds of Iron with Fatty. (P) Huntington.) (xii, 1894) .....                                                | 746  |
| Manufacture of Monobasic and Dibasic, and Anhydrides of the Latter. (P) Abel. From Haarmann and Reimer. (xii, 1893) ..... | 948  |
| Methods of Determ. Free, in Oils. (Holde.) (ix, 1890) .....                                                               | 112  |
| Mineral, Method of Quickly Detect. in Vinegar. (Chiappe.) (i, 1882) .....                                                 | 160  |
| Mixing Liquid, and Dry Powders for Disinfecting. (P) Urquhart. (iv, 1885) .....                                           | 134  |
| Of Beeswax, Extraction of Free. (Marie.) (xiii, 1894) .....                                                               | 1207 |
| Of Low Carbon Percentage in Baku Petroleum. (Ascham.) (ix, 1890) .....                                                    | 357  |
| Of Palm Oil, Solid Fatty. (Nordlinger.) (xi, 1892) .....                                                                  | 445  |
| Of the Pyridine Series, Synthesis of Alcohol. (Ei-horn.) (ix, 1890) .....                                                 | 614  |
| Of the Sugar Group. (Fischer.) (ix, 1890) .....                                                                           | 1052 |
| Of the Sugar Group, Reduction of. (Fischer.) (viii, 1889) .....                                                           | 994  |
| Of the Thionic Series, Action of Alkalis on. (Berthelot.) (viii, 1889) .....                                              | 541  |
| Organic, in Germany. (T.R.) (xii, 1893) .....                                                                             | 963  |
| Organic, in the Juices of the Sorghum Cane. (Wiley and Maxwell.) (ix, 1890) .....                                         | 526  |
| Oxidation of Fatty, with Potassium Permanganate: (Grussner and Hazura.) (viii, 1889) .....                                | 806  |
| (Hazura.) (vii, 1888) .....                                                                                               | 681  |
| Packing. (P) White and Rickmann. (vii, 1888) .....                                                                        | 845  |
| Payen's Process for Detection of Mineral, in Vinegar. (Cereil.) (x, 1891) .....                                           | 800  |
| Petroleum. (Zaloziecki.) (xii, 1893) .....                                                                                | 33   |
| Preparation of Anhydrides of Organic. (P) Chemische Fabrik vonnals Hoffmann. (iv, 1885) .....                             | 497  |
| Preparation of Solid Fatty. (P) Jacobs. (i, 1882) .....                                                                   | 237  |
| Preventing Development of, during Malting Barley. (P) Paterson. (ix, 1890) .....                                          | 960  |
| Production of, in France. (T.R.) (viii, 1889) .....                                                                       | 228  |
| Production of Oxy- and other Fatty. (P) Schmitz and Toenges. (xi, 1892) .....                                             | 927  |
| Production of Volatile Fatty, from Dextrose. (Loew.) (ix, 1890) .....                                                     | 637  |
| Prod. of Volatile, in Alcoholic Fermentation. (Bismarck.) (xiv, 1895) .....                                               | 1055 |
